## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed June 20, 2006 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made as set forth below.

### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-3 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3 of copending Application No. 10/781,309. Although the conflicting claims are not identical, they are not patentably distinct from each other because both inventions are drawn to logic for scanning a plurality of radio frequencies during a scan interval, logic for maintaining a channel map having an entry for each of the plurality of radio frequency channels and if one or more messages is received on a channel, the corresponding entry further including an AP-ID for at least one of the access points that sent a message on the channel, logic for selecting a channel from the channel map, logic for transmitting messages on the selected channel during a scan interval and logic for ascertaining whether the apparatus should commence communications with other wireless devices on the selected channel. Both inventions have logic for storing a power level for each

AP-ID for each entry in the channel map and both inventions have logic for evaluating the power level of messages received on the selected channel.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
